elliptic and, to a lesser extent, parabolic partial differential operators. Equations that are neither elliptic nor parabolic do arise in geometry (a good example is the equation used by Nash to prove isometric embedding results); however many of the applications involve only elliptic or parabolic equations.

Identifying Ordinary Partial and Linear Differential

Differential equations (DEs) come in many varieties. And different varieties of DEs can be solved using different methods. You can classify DEs as ordinary and partial DEs. In addition to this distinction they can be further distinguished by their order. An ordinary differential equation (ODE) has

A solution (or particular solution) of a differential equation of order n consists of a function defined and n times differentiable on a domain D having the property that the functional equation obtained by substituting the function and its n derivatives into the differential equation
